Dear Sirs,

Re: Renovation Septic Tank – Pilgrims Hatch, Brentwood, Essex.

We are writing with regards to the recent works carried out at the above site by Ultimate Coatings where the required works consisted of the repair/ renovation of a 5000 gallon septic tank, due to the septic tank becoming permeable and the high water table rising due recent weather conditions the 5000 gallon septic tank was filling every 48 hours and therefore required emptying out by means of tanker vacuum which was resulting in high costs to the client. Due to the location of the septic tank making access restricted excavation and replacement of the tank was not an option

Ultimate coatings came recommended to us by a leading manufacturer and supplier within our industry as an alternative solution, Ultimate Coatings attended site, submitted a proposal and specification which they subsequently delivered professionally, successfully and within budget.

Having internally inspected the septic tank prior to the commencement of the works and then again upon completion the results are remarkable. Having received a 100% customer satisfaction notification from the client we as a main contractor would highly recommend Ultimate Coatings product and services and look forward to working in conjunction with them again

Assuring you of our continued attention at all times.

Yours Sincerely,
For on behalf of Cascadia

Colin Horrix
Director
